

ReCover Recycling Programme

Robert Malcolm Limited are actively reducing our environmental impact by supporting manufacturers that keep sustainability front of mind, both during manufacturing and how waste product is managed. Our partner Moduleo are embracing recycled content in a bid to reduce the use of raw materials, and produce zero waste by 2040 - re-use and recycling are key to fulfilling this ambitious goal.

3 Key Opportunities for Recycling

- Post- Industrial Waste
Bi-product of manufacturing, can also include finished product that has defects or errors.
- Post- Installation Waste
Waste created onsite from installation (off cuts). This is uncontaminated product that hasn't had any adhesives etc. applied.
- Post- Installation Waste
This includes previously installed product that has been uplifted. Although this is the most complex waste to recycle due to the contaminants we stand by our commitment to reduce our environmental footprint.

How Does It Work?

- Identify that the project would like to participate in the ReCover programme with an approved Moduleo product
- Due to health and safety requirements Robert Malcolm cannot receive uplifted product containing, or previously installed over hazardous materials i.e. asbestos
- Contact Robert Malcolm for a quote to cover freight and associated costs including carbon off set
- Product to be recycled is to be stacked securely on a pallet to be collected by Robert Malcolm
- When enough pallets have been collected to fill a container it is shipped from Robert Malcolm to Europe for recycling
- Container is sorted into:
 - Uncontaminated material (off cuts) that are sent back to the manufacturing plant to be used as raw material for new vinyl
 - Some material cannot be recycled into new flooring as they are not REACH compliant, these materials are made into other items such as footwear, road cones and outdoor tiles
- A certificate is provided with the equivalent of CO2 saved by recycling or re-use

Benefits of the ReCover Programme

- Preventing recyclable materials going into landfill
- Waste becomes a raw material
- Fossil resources decreases
- CO2 emissions decline
- Advantage for specified work where sustainability is a key priority

To find out more about the ReCover programme please contact your local Account Manager.
